Don't Cover Up Old Leaks with New Streets!

The heavy schedule of planned road construction and resurfacing has placed new demands on municipalities and contractors to survey for leak possibilities at the site of new roadway construction. Implement a leak survey to verify the integrity of water lines before and after construction jobs.

Survey Water Main Before Street Resurfacing and New Construction

ATS offers an intensified survey of the water main and water services in your system that will be affected by construction projects

- Resurfacing of Existing Roads
- New Road Construction
- Verify Water Main Integrity for Leakage Before and After Construction Projects
- System-Wide or Target Area Leak Surveys

A concentrated leak survey in advance and after road construction is the sensible, cost-effective approach to avoid the unnecessary expense of digging up newly resurfaced roads for an old leak that decided to surface after the completion of a construction project.

- All leaks are ultrasonically detected and electronically pinpointed with state-of-the-art computerized **Leak Correlators** for the highest possible pinpointing accuracy. (avg. 96% in the first repair hole)
- **ATS** consistently pinpoints leaks in the toughest situations that the other firms miss.

ATS Survey Programs customized for every Budget and System Type

- Comprehensive System-Wide Leak Surveys
- Multi-Year Partial & Full System Leak Surveys
- "Pre" and "Post" Construction Leak Surveys
- Economy & Emergency Surveys
- Pilot Survey of a Specific Area
- Re-Surfacing Leak Surveys

Don't let this happen to you! Find all your leaks before they find you.
