

Valve Exercising & Assessment Programs

Water Conservation Specialists
Established 1979

Leak Surveys • Leak Pinpointing • Utility Location • Valve Assessment Programs
GPS-GIS Mapping Surveys • Location Equipment Sales and Expert Training

ATS Comprehensive Valve Programs:

ATS uses only the best computerized automated equipment to accomplish this important annual maintenance program to keep your water system running and flowing smoothly. All **ATS Field Technicians** are fully experienced, and factory trained.

Valve Operation is performed with EH WACHS' **best** ERV-750 Automatic Valve Operator Maintenance Trailer, Hydraulic Valve Operator and Trav-L-Vac 3000 to clean out and access valves.

- Every valve is thoroughly cleaned, assessed and properly operated to AWWA Valve Inspection & Maintenance Standards.
- Every valve location is confirmed, located and logged with Trimble or Juniper GPS products.
- Automated valve exercising is safer then exercising by hand.
- All Valve Box and Valve Vault Covers are marked with “environmentally friendly” blue paint for easy identification.
- Comprehensive valve assessment data is digitally logged for easy reference and compiled in an easily updateable database.

One of our Wachs ERV-750 Valve Operator Maintenance Trailer and Trav-L-Vac

Locating buried valves and lines are no problem for ATS Techs

Benefits of an ATS Comprehensive Valve Exercising and Assessment Program:

- Reduce water loss and property damage by being able to quickly isolate a water main break and minimize service disruption.
- Pro-Actively diagnose and repair bad valves before you need them.
- Knowing exactly where the valves are located assists in the location of the rest of the water system. This is often an issue with older utilities.
- Properly exercised valves can last a lifetime.
- Reduced labor costs by being able to find and use the “key” valves in an emergency.
- In an emergency, exercised valves ensure rapid shutdowns that minimize water loss and service loss to neighboring properties.
